Steps for setting up VMWare View on Ubuntu Linux

1. Begin by opening a Terminal window. You can do this by clicking on the Applications menu, then opening up Accessories and clicking on Terminal.

![Terminal window](image1.png)

2. Type the command “sudo apt-get install vmware-view-open-client” without the quotes. The computer will ask you for your password. Enter it and the install will continue. You will have to hit “y” to verify the install.

![Terminal window](image2.png)
3. You can now open the VMWare View client from the Applications menu, and opening Internet, and clicking on VMWare View Open Client. You will get a window as shown below. Enter “rcrc.roanoke.edu” in the Address box, without quotes as shown below.
