## An Open Letter to Psychology Majors

Dear Psychology Majors,

I taught, advised, and mentored psychology majors for 40 years at both a small, private liberal arts college and a large, public research university. Although these two schools were remarkably different, all my students were concerned about their ability to provide an answer to the perennial question, “What can I do with a major in psychology?” This challenging query motivated me to create and teach a careers-in-psychology class to help my students answer it and to write a textbook for the class titled *The Savvy Psychology Major*. The goal of the class was to enable students to become savvy psychology majors by creating an educational plan that would enable them to give clear, complete, convincing, and confident answers to the following questions:

1. What careers can I enter if I major in psychology, and which of these would be a good choice for me?
2. Which of these careers can I enter with a bachelor’s degree, and which require a graduate degree?
3. What specific knowledge and skills (KSs) must I possess to enter and succeed in my chosen career?
4. How can I use the curricular and the extracurricular components of my education to develop these KSs?
5. How can I convince potential employers or graduate school admissions committees that I possess these KSs so they will hire me with a bachelor’s degree or accept me into their graduate program?

This resource, combined with some serious and honest self-reflection on your part, can help you answer the first three of these questions. Once you feel comfortable with your answers, your next step should be to meet with your academic advisor. Explain your answers to these three questions during this meeting, and then ask your advisor to help you create a plan for the remainder of your undergraduate education that will enable you to enroll in the classes and engage in the extracurricular activities (e.g., internships, service learning, and leadership opportunities) that will enable you to develop the KSs you need to prepare yourself for your chosen career. The final step will depend upon if your career requires you to earn a degree beyond the bachelor’s. If it does, seek the aid of a faculty mentor who can help you create and obtain the documents you will need to apply successfully to a graduate program (i.e., a curriculum vita, a personal statement, and at least three strong letters of recommendation from appropriate people). If you can enter your chosen career with a bachelor’s degree, then visit your career center where an employment counselor can help you create the necessary documents and information you will need to be hired (i.e., a resume, a cover letter, and effective answers to challenging interview questions). This strategy is a complex task, so it is best to break it down into three smaller and more manageable steps by understanding, embracing, and living out the wisdom of the following short, but venerable quotations.

1. The **Oracle at Delphi** (speaking through **Socrates**), said “**Know thyself.**” Savvy psychology majors know themselves when they identify their skills, interests, and values and use this information to create realistic career goals.
2. **Shakespeare** wrote *Hamlet* in which Polonius provided the following sage advice, “**To thine own self be true.**” Savvy psychology majors are true to themselves when they (a) use their self-knowledge to identify careers in which they can perform well, enjoy the work they do, and value the products of their work and then (b) create carefully crafted and realistic plans to use their undergraduate educations to prepare for, enter, and succeed in these careers.
3. **Nike** (the ancient Greek goddess of victory), speaking through her 21st century commercial namesake, said “**Just do it.**” Savvy job-seeking psychology majors just do it when they put their realistic plans into action by actually engaging in the specific behaviors that will enable them to successfully enter and succeed in their chosen careers.

I used these three pieces of advice to help thousands of psychology majors successfully answer the question, “What can I do with a major in psychology?” Although I am now retired and you are not my

students, it would give me great satisfaction if you allowed me to teach, advise, and mentor you by providing you with the career information you can use to become savvy psychology majors.

Sincerely yours,

Drew C. Appleby, PhD  
 Professor Emeritus of Psychology  
 Director of Undergraduate Studies in the IUPUI Psychology Department (Retired)

P.S.: This resource is not a finished product; it is a work in progress. If you (a) discover any errors such as dead hotlinks, online sources unrelated to their listed career, or online sources that contain inaccurate or inappropriate information; (b) are aware of any trustworthy online resources that would expand this list; or (c) would like to recommend a career that can be added to this resource, please share this information with the me at [dappleby@iupui.edu](mailto:dappleby@iupui.edu).

## Rationale and Purpose of this Resource

Undergraduate psychology programs have traditionally provided students with abundant opportunities to acquire the knowledge and skills necessary to prepare them for graduate school, which is the post-baccalaureate step most familiar to psychology faculty. While this strategy has worked well for the small subset of psychology majors who enter graduate school after completing their undergraduate education, it has not always been as successful for the vast majority who enter the workforce immediately after they graduate. The authors of the most recent edition of the *APA Guidelines for the Undergraduate Psychology Major* (American Psychological Association, 2013) recognized this problem and sought to reduce its negative impact by urging undergraduate programs to help their immediate-career-seeking students develop more meaningful professional direction by (a) acquiring an understanding of the careers in which people with backgrounds in psychology are typically employed and (b) becoming familiar with the skills and knowledge desired by those who hire people with baccalaureate degrees in psychology. Once students acquire this foundational knowledge—and use it to identify their potential career paths—faculty and advisors can provide them with specific strategies to utilize curricular and extracurricular opportunities to identify, clarify, prepare for, and attain their professional goals. The purpose of this resource is to provide **all** psychology majors—**regardless of whether or not they plan to attend graduate school**—with access to the broad panorama of careers they can enter, the nature of these careers, and the skills and knowledge they will need to enter and succeed in these careers.

## Description and Instructions for the Resource

The 258 careers in this resource are accompanied by over 1,350 internet sites that can contain a wealth of information about the nature of these careers. To increase the navigational efficiency of this almost 50-page resource, these careers are organized into the following 15 broad occupational clusters, which are highlighted in **YELLOW**. This categorical structure enable users to identify groups of related careers that fit their unique patterns of interests, values, goals, skills, and knowledge and then locating these career groups by Control-Clicking on the hyperlinks below.

- |   |   |  |
|---|---|--|
| 1. <a href="#">Business, Advertising, and Finance</a> | 6. <a href="#">Human Resources</a>            | 11. <a href="#">Social and Human Services</a>      |
| 2. <a href="#">Children and Families</a>              | 7. <a href="#">Law and Law Enforcement</a>    | 12. <a href="#">Sport, Fitness, and Recreation</a> |
| 3. <a href="#">Counseling</a>                         | 8. <a href="#">Military</a>                   | 13. <a href="#">Technology</a>                     |
| 4. <a href="#">Education</a>                          | 9. <a href="#">Psychology</a>                 | 14. <a href="#">Therapy</a>                        |
| 5. <a href="#">Health and Medical Services</a>        | 10. <a href="#">Religion and Spirituality</a> | 15. <a href="#">Other</a>                          |

Persons employed in 56 of these 258 careers bear the official title of psychologist and must hold the appropriate graduate degree to carry this title. Persons employed in the remaining 202 psychology-related careers (i.e., careers that require the demonstration of psychological knowledge and skills, but which do not carry the title of psychologist) are divided almost equally into two categories: those whose careers can be entered with a bachelor's degree, which are highlighted in **BLUE**, and those whose careers require a graduate degree, which are highlighted in **GREEN**. Careers are listed alphabetically in each of these categories, and those rated by *O\*NET* (see an explanation of *O\*NET* below) as having a bright outlook because they are expected to grow rapidly in the next several years, will have large numbers of job openings, or are new and emerging occupations are marked with **\***. Thirty of these careers appear in more than one category, such as Educational Psychologist, which appears in both the Education and the Psychology categories. Each career is followed by a set of hotlinks to a variety of online sources that provide users with answers to the following questions.

1. What knowledge, skills, abilities, tools, and technologies required in this career?
2. What do workers actually do in this career and under what conditions do they carry out these duties?
3. What types of job training or education are required to enter this career?
4. What interests, values, and characteristics do workers in this career possess?
5. How much money do people employed in this career earn?
6. How many people are employed in this career, and what is the projected need for it in the future?
7. What other occupations are related to this career?

A label that identifies its source precedes each hotlink. These labels and their sources are below.

- **DOT, OOH, and O\*NET:** indicate government websites that enable visitors to explore careers
- **Wild Card:** indicates a nongovernmental website that enables visitors to explore careers
- **Video:** indicates a YouTube or other online visual media source created to enable site visitors to explore careers, some of which feature “a day in the life” of a person employed in a particular career
- **Interview:** indicates a transcribed interview with a person employed in a particular career
- **STP and a Chapter Number:** indicates a chapter containing advice about how to prepare for a career in a specific sub-discipline of psychology that appears in an edited e-book titled *Academic Advising: A Handbook for Advisors and Students: Volume 2: A Guide to the Sub-Disciplines* (Irons, J. G., & Miller, R. L. Eds., 2015) published by Division 2 of American Psychological Association (The Society for the Teaching of Psychology)
- **APA Careers:** indicates a resource created by the American Psychological Association to enable site visitors to explore careers in a specific sub-discipline of psychology (e.g., social, clinical, or industrial/organizational psychology)
- **APA Division:** indicates a division of the American Psychological Association devoted to the support of psychologists who practice a particular sub-discipline of psychology (e.g., by publishing journals and newsletters, hosting listservs, holding conferences and meetings, providing networking and mentoring opportunities, and sponsoring awards)

Go to <http://www.apa.org/about/division/activities/dive-student.pdf> to see how students can benefit from becoming a member of one of these divisions at a very low membership fee.

## An Explanation of O\*NET

This description of *O\*NET* is from its website (National Center for *O\*NET* Development, 2015, ¶ 1).

The *O\*NET* program is the nation's primary source of occupational information. Central to the project is the *O\*NET* database, containing information on hundreds of standardized and occupation-specific descriptors. The database, which is available to the public at no cost, is continually updated by surveying a broad range of workers from each occupation. Information from this database forms the heart of

O\*NET OnLine, an interactive application for exploring and searching occupations. The database also provides the basis for our Career Exploration Tools, a set of valuable assessment instruments for workers and students looking to find or change careers.

### **Adolescent Psychologist**

The essential purpose of adolescent psychology is to encourage understanding of developmental issues, sociocultural impacts, and biological influences that cause poor mental health in adolescents. With this increased knowledge, adolescent psychologists can then go about devising strategies for improving the welfare and functioning of pre-teen and teenage children as it pertains to everyday life, education, and interaction with peers and family. Adolescent psychology is an area in which clinical or counseling psychologists can choose to specialize. Typically, adolescent psychologists deliver psychological services to children between the ages of 12 and 18, however, this is not always the case. Some adolescent psychologists will treat younger children, and likewise treat young adults. Treating adolescents requires a great deal of understanding of human development, as well as a good grasp of social and cultural influences that impact an adolescent's behavior. Understanding family influences and an adolescent's role in his or her specific family is additionally required. Usually, adolescent psychologists focus on problems that are common to the developmental period. Many psychologists will identify and treat emotional or social issues, biological vulnerabilities, cognitive deficits, and stress related to developmental changes of adolescence. Adolescent psychologists will also treat significant mental health issues, including psychoses, neuroses, and personality disorders. Some adolescent psychologists will work exclusively with a particular population, such as special education students, children with autism, or abused or neglected adolescents.

[Control-click here to return to Adolescent Psychologist](#)

### **Air Force Psychologist**

Historically, Air Force psychologists assisted in the recruiting processes by helping officers select good aviation cadets. They used a variety of psychological tests and evaluation techniques to measure a candidate's aptitude and skill set. Today, Air Force psychologists are primarily responsible for providing clinical mental health services. They also develop prevention programs to support overseas troop deployments. Combat fatigue and multiple deployments have created a lot of stress for service members and their families. As a result, more psychologists are needed in all branches of the military. Service members often struggle with relationship problems, anxiety, depression, and suicidal thoughts. Soldiers who have experienced combat frequently meet with psychologists to discuss depression, anxiety, post-traumatic stress, and other issues caused by combat stress. Soldiers who do not deal with post-traumatic stress often develop severe anxiety and depression, struggle with their temper, experience suicidal thoughts, and abuse drugs and alcohol.

[Control-click here to return to Air Force Psychologist](#)

### **Analytical Psychologist**

Analytical psychology, though heavily influenced by the works and personality of Freud, breaks away from psychoanalysis in its treatment of patients and its views on the human mind and spirit. Analytical psychologists assume the presence of what is referred to as the collective unconscious, and gear treatment toward integrating darker, more primal states of existence with ego states that are more evolved. In other words, violent impulses are understood in a non-judgmental manner, and are effectively merged with more evolved human ideals like compassion and empathy to form a balanced self. As an analytical psychologist, you will gain an understanding of how the human mind works- which is an advantage in virtually every social setting. Analytical psychologists use their clinical knowledge of human behavior to help others overcome serious emotional blockages, which have resulted in neurosis and other psychological conditions. As an analytical psychologist, you will work very closely with those suffering from bothersome emotionally-based symptoms.

[Control-click here to return to Analytical Psychologist](#)

### **Army Psychologist**

Army psychologists are responsible for diagnosing problems and recommending treatment strategies for soldiers struggling with various types of emotional, relationship, anxiety, and substance abuse problems. They work with soldiers stationed in deployment centers preparing to leave for warzones and those who've been involved in combat, including special forces operatives. Army psychologists working with soldiers who frequently participate in combat operations typically recommend solution-focused therapy, while psychologists meeting with soldiers stationed in deployment centers often teach them cognitive-behavioral techniques, so these soldiers can cope with stress before it becomes a bigger problem. Psychologists working with veterans struggling with anxiety or depression often diagnose them with post-traumatic stress disorder (PTSD) and make treatment recommendations. Many Army psychologists work at veterans hospitals and medical clinics located on military bases. Some veterans struggle with chronic pain, poor eyesight, holding a job, memory loss, PTSD, and other problems, so the Army has taken steps to increase the accessibility of qualified psychologists. Even soldiers who have not been injured or emotionally

scarred often struggle with transitioning to civilian life after their deployments end. To better cope, they often meet with psychologists and other mental health professionals.

### **Aviation Psychologist**

Although aviation psychology is a specific domain within the practice of psychology, it is a highly varied field. Individuals trained as aviation psychologists may work behind the scenes with engineers to assist with the design of the flight deck and cabin areas of an aircraft. Their role would be to ensure that seats, dials, lights, and other components in the aircraft are user-friendly and that the flight crew and passengers can interact with the airplane's mechanisms in an efficient and safe manner. Psychologists in this field also work with airlines and the military to select pilots. They utilize their expertise in human behavior to evaluate potential pilots for psychological health by screening for various mental health issues like depression, bipolar disorder, different anxiety disorders, and personality disorders. Aviation psychologists will additionally devise training programs for pilots, flight attendants, and other personnel as well, including maintenance crews and air traffic controllers. The training programs for flight crews specifically focus on promoting strategies to enhance attention, perception, memory, and communication, as well as maintaining calm in stressful situations. Because of the high-stress nature of jobs in the aviation industry, aviation psychologists typically provide mental health and wellness services to members of the flight crew and various airline or airport employees on the ground. These services revolve around maintaining a healthy diet, a good balance between work and leisure, and strategies for managing jet lag. Wellness programs that seek to reduce stress are usually designed and implemented by aviation psychologists as well. In this capacity, an aviation psychologist's focus is less on formal counseling techniques and more on providing guidance and coaching for making decisions that improve the person's on-the-job performance and overall well-being. In the event of an accident, aviation psychologists will provide emergency mental health services to survivors and their families. These services can range from crisis intervention in the immediate aftermath of an accident, to long-term counseling for flight crew that survive the accident and airline employees that are impacted by the event. Aviation psychologists will often assist in the investigation process as well, offering insight into the behavior and mental state of pilots and co-pilots both in the cockpit prior to the accident, as well as their behavior in their daily lives in the weeks and months prior to the accident. Experienced aviation psychologists, particularly those with advanced degrees, can work in administrative or policy-making positions with airlines or government agencies such as the National Transportation Safety Board. Aviation psychologists at this level may oversee operations to ensure their employer is compliant with safety regulations, or help create a culture of safety consciousness among flight crews, maintenance crews, and other airline stakeholders.

### **Biological Psychologist**

Biopsychology, also known as biological psychology, physiological psychology, or behavioral neuroscience, is the study of biological influences on behavior, with particular attention to the roles of genetics, evolution, and the nervous system. It should be distinguished from neuroscience, which emphasizes cellular and molecular functions of the nervous system, and from neuropsychology, which also studies brain-behavior relationships, but focuses on the clinical assessments of brain function in individuals with brain disorders. Topics commonly covered in biopsychology textbooks include function of neurons, sleep, movement, brain development, language, consciousness, sexual behavior, hunger/thirst, temperature regulation, learning and memory, emotion, sensation, and psychological disorders. The three main career tracks for a biological psychologist are academic, private industry, and government. In academic settings (i.e., college or university), biological psychologists would likely teach courses in their specialty field and be expected to obtain grant funds to sponsor their research and to publish research findings in scholarly journals. In private industry, biological psychologists may work for medical or pharmaceutical companies conducting research. For example, some biological psychologists work at medical schools where they primarily do research in collaboration with researchers in related fields. Finally, in a government position such as at the National Institutes of Health, biological psychologists would likely conduct research on health-related topics, but the funding would come from congress appropriated research dollars.

### **Child Psychologist**

A child psychologist analyses the development of mental, social and emotional abilities in children as they grow. They usually concentrate on children during the prenatal stage until when they reach adolescence. However, this is not necessarily a restriction. Child psychology is a vast field that studies and analyses various development processes in children. Such issues include understanding the role of genetics in a child's behavior and ability. Studies are focused on evaluating language

development and communication abilities as a child grows. This area of study emphasizes the role and traits related to child's gender as they develop. Various functions of professional psychologists are as vast as the varying issues in children. They treat children in clinical settings to aid them in sorting out issues that might impede their ability to develop over time. Other than aiding children in therapeutic processes, these psychologists also work with gifted ones and even special cases. Such cases include children with certain mental disabilities which might obstruct them from being able to develop in the manner they should. Child psychologists diagnose disabilities in a child and measures a child's capability to master learning processes. They identify in which area children need help and provide the appropriate treatment as well as therapeutic processes. They evaluate various causes of behavioral issues in children and attempt to reduce instances of troublesome behavior. They identify the underlying reasons why a child is acting out and then help to apply logic in resolving that issue. Child psychologists also design and administer various psychological tests in order to be able to evaluate children.

### **Christian Psychologist**

Many people today believe that psychology originated in the 1800's. However, every developing culture has some understanding of the nature of human beings. If we define psychology simply as the disciplined study of individual human beings, then versions of psychology can be found in many cultures, some rather ancient, and in the great writings of human civilization. Christian psychology began in the Scriptures of the Hebrews and early Christians. Later, Christian thinkers and ministers throughout the ensuing centuries developed many understandings of human beings, using the Bible as a canon or standard for reflection. As a result, the history of Christian thought contains countless works of psychological import that offer the Christian community a rich treasure of insights, themes, and foundational assumptions upon which to ground the project of a Christian psychology. To develop what we believe will be a more valid psychology, Christian psychologists will look to the Bible and the Christian tradition as orienting guides for our investigations. In addition, we will read, learn from, and interact with the psychological knowledge of other communities (obviously the modern), and, where we can, we wish to contribute to a general body of psychological knowledge that can exist irrespective of communal perspective. In many areas of psychology, no substantial differences will be found between the psychologies of different intellectual communities (e.g., in the more mechanistic aspects of human nature, like neural transmission, memory formation, infant emotional development, and so on). However, we also seek to produce distinctively Christian theories, research programs, and soul-care practice, where appropriate, in areas that are more world-view dependent (e.g., motivation, personality, psychopathology, therapy, and social relations), where a Christian perspective would be expected to yield qualitatively different ways of interpreting human beings. Recognizing and utilizing one's communal perspectives will likely become increasingly important in the general field of psychology in the future, because of the growing recognition that a community's world-view assumptions affect not only what we can see in the human sciences, but also the development of the objects under investigation. A Christian vision of human nature is shaped primarily by the Christian Scriptures, as well as Christianity's intellectual and ecclesial traditions. However, a Christian psychology will also be critically informed by other relevant sources of psychological truth, particularly its own reflection, research, and practice, but also the psychological work of other traditions (e.g., secular psychology), philosophy, human experience, and the other human sciences. While God's understanding of human nature is the goal of a Christian psychology, given human finitude and the existence of distinct Christian traditions, the Society welcomes those working from any perspective within the historic Christian Church.

### **Clinical Psychologist**

Clinical psychology is a complex and diverse specialty area within psychology. It addresses a breadth of mental, emotional and behavioral disorders, integrating the science of psychology with the prevention, assessment, diagnosis and treatment of a wide variety of complicated human problems. As the field of clinical psychology has evolved, so too have the expectations of today's practitioner. Psychologists who provide clinical services are now trained in a wide range of techniques and theoretical approaches that equip them with the knowledge and skills necessary to advance the science of psychology, the professional practice of psychology, and people's general health and well-being. Thanks to their knowledge and skill set, clinical psychologists enjoy careers in industries as varied as research, integrated health care, teaching, program development and evaluation, consultation, public policy and professional practice. Long gone are the days when clinical psychologists only worked in limited settings such as private practices or state hospitals. Today, many work in teams with other health, public

health or social service organizations. Some clinical psychologists work exclusively on specific mental, emotional and behavioral issues. These range from short-term problems, such as difficulties resulting from relationship conflict or work stress, to more serious and often chronic conditions, such as post-traumatic stress disorder and addiction. Others focus on specific populations like youth; families; couples; racial and ethnic groups; lesbian, gay, bisexual and transgender individuals; and older people. The application of their research and the science behind their work make clinical psychologists invaluable in mental health and health care settings alike and in hospitals, schools, courts, the government, the military—almost anywhere you can imagine.

### **Cognitive Psychologist or Cognitive Neuroscientist**

Cognitive psychologists study how people acquire, perceive, process and store information. This work can range from exploring how we learn language to understanding the interplay between cognition and emotion. New technologies like magnetic resonance imaging (MRI) allow researchers to see a picture of the brain at work — helping them to understand how a brain reacts to a particular stimulus or how differences in brain structure can affect a person’s health, personality or cognitive functioning. Brain science and cognitive psychology is one of the most versatile psychological specialty areas today—and one of the most in demand. All professions have a compelling interest in how the brain works. Educators, curriculum designers, engineers, scientists, judges, public health and safety officials, architects and graphic designers all want to know more about how the brain processes information. Their research and its resulting applications have become an integral part of how organizations, schools, and businesses function and succeed. In clinical settings, cognitive psychologists seek to treat issues related to human mental processes, including Alzheimer’s disease, speech issues, memory loss and sensory or perception difficulties.

### **Community Psychologist**

Community psychology represents a new perspective for looking at the problems of everyday life. It recognizes that many of the problems people confront arise not from disturbances within their individual psyches, but from the failure of community systems to adequately socialize and support its citizens. It replaces the traditional clinical perspective on helping that sees people in terms of their pathologies and deficits with the notion that all people have strengths and competencies. Community psychologists deal with a wide range of social problems such as poverty, homelessness, substance abuse, school failure, delinquency, empowerment, diversity, aggression, and violence. Community psychologists differ from clinical psychologists in that community psychologists focus on prevention and promotion of behaviors that contribute to wellness rather than on interventions that address symptoms already present in the individual. Scientific inquiry in community psychology integrates research with action. It is directed towards the design and evaluation of ways to facilitate psychological competence and empowerment, prevent disorder, and promote social action and social change.
