

Instructor:

Dr. Chris Lee Trexler 270D
375-2347 clee@roanoke.edu

Office Hours:

Mon/Wed: 2:20-3:30pm
Tue/Thu: 1:10-2:40pm

Course Description:

As we surf the web, are we really exercising free will? Whether it be reading, shopping, or interacting socially, we'd like to think that we are in control of our choices. The reality is that web designers and marketers use conclusions drawn from vast amounts of data to carefully craft and control our web experiences and actions. This course provides an inquiry-focused introduction to the statistical methodologies necessary to successfully explore and answer this question. Along the way students will develop an understanding of how data is collected and used in relation to virtually everything we do on the internet.

Statistics Objectives: Provides an inquiry-focused introduction to statistical methodologies. Students will gain an understanding of how decision making is accomplished using modern statistical techniques. Topics include descriptive statistics, graphical methods, estimation, elementary probability, statistical inferences, and analysis of variance; students will apply the techniques of data analysis to data sets and/or statistical studies.

Learning Outcomes:

1. Students will be able to use the methodologies of statistics to
 - a. Investigate a topic of interest and make decisions based on the results.
 - b. Design and carry out a simple statistical experiment.
 - c. Critique news stories and journal articles that include statistical information. In the critique students will recognize variability and its consequences, identify potential sources of bias and both proper and improper cause and effect inference.
2. Students will be able to articulate the importance and limitations of using data and statistical methods in decision making.
3. Students will be able to write about course topics clearly and effectively.
4. Students will be able to interpret quantitative information related to the course topic.

Technology: For some sections of the course students will need statistical software for calculations and graphics. Excel and Minitab are provided on college lab computers. Students will also need a scientific calculator.

Required Texts and Readings:

- *Statistics in Practic.* Moore, Notz, & Fligner
- *Hooked: How to Build Habit Forming Products,* Nir Eyal.
- *A Writer's Reference (6th Ed).* Hacker, Diana.

Attendance: Attendance is critical to the understanding of the material in the course; it is both required and expected. Any absence that is not discussed with the instructor prior to the missed class is considered unexcused. I will assume that if you accumulate 3 unexcused absences you are not interested in completing the course and will drop you from the class with a grade of DF (dropped-failing) recorded, regardless of your current average in the course. You, your advisor, and the registrar will receive a warning email at your second unexcused absence. When absent, excused or unexcused, you are responsible for all material covered in class. Work missed due to either an unexcused or excused absence can only be made up when arrangements are made in advance of the absence.

Homework / Quizzes: Homework problems will be assigned and collected daily. Do not wait to start these until the night before the next class period. It is safe to assume there will be an in class quiz on each and every Friday.

Writing: While knowing statistics is important, it is useless if you cannot communicate the ideas and concepts you have learned, and more importantly, apply them to a topic such as whether or not we have free will on the internet. There are four writing assignments throughout the semester. These are an important and significant component of the course. These assignments will push you to address issues from a statistical standpoint and improve your writing and communication skills.

Writing Assignment 1: This is personal, reflective opinion writing. You will be asked to describe some of your daily activities on the internet and think through how you may be being manipulated, or if you are above manipulation and are truly doing whatever you'd like on the internet.

Article Analysis: For this assignment you will critique an article from an established news source. The topic of the article will be the use of statistics by online entities. You will use the knowledge you have gained thus far in the course to critique the methods used by the author.

Project: Prior to the date this project is started, you will have read the entire book *Hooked: How to Build a Habit Forming Product* by Nir Eyal. You will then propose your own product that you would like to bring to market. This may be a competitor to Facebook, a photo sharing site, a new game, or any other such similar product. Your initial product design will be well thought out. Then, you will apply statistical concepts you have learned in this course. You will design and identify the importance features of statistical studies of data you will measure about users of your products. You will describe how you will apply this quantitative information to make decisions or draw conclusions about needed changes to your product to increase success. Finally, you will discuss how you will handle uncertainty in the data you propose to measure. How will uncertainty affect your analysis and continued development of your product?

Late Work: Unless specific permission is given in advance of the due date, no late work will be accepted.

Final Exam: The final exam will be cumulative, equally covering all material presented in the course.

Grading: Components of a student's grade will be weighted as follows:

Tests	50%
Homework / Quizzes / Short Writing	15%
Project	15%
Final Exam	20%
	<hr/>
	100%

A grade scale will be determined after final averages are computed, but will be not be lower than the scale given below.

0	60	63	67	70	73	77	80	83	87	90	93
F	D-	D	D+	C-	C	C+	B-	B	B+	A-	A

Cell Phones: This is very simple - no cells phones are allowed to be used or even visible in our classroom. This includes before, during, and after class. If a cell phone is seen, the student will be asked to leave the classroom and the day will be counted as an unexcused absence.

Academic Integrity: Students are expected to follow the integrity policy detailed in the handbook *Academic Integrity at Roanoke College*. Additionally, if you are ever uncertain as to how the College's policy pertains to any assignment or exam in this course, please ask me for clarification. The bottom line is that all work that a student submits for a grade must be *solely* the work of that student unless the instructor has given explicit permission for students to work together.

You will have the opportunity on some quizzes and our main project to collaborate with another as you work in pairs. It is critical that you understand that collaboration means both parties are contributing equally and meaningfully to the assignment. Adding your name to the work of another, as well as using a divide-and-conquer approach, are both examples of seeking credit for work that is not your own.

MCSP Conversations: The Math, Computer Science and Physics department offers a series of discussions that appeal to a broad range of interests related to these fields of study. These co-curricular sessions will engage the community to think about ongoing research, novel applications and other issues that face our discipline.

Sessions are currently being scheduled, and all will be announced in advance.

Members of this class are invited to be involved with all of these meetings; however participation in **at least one** of these sessions is mandatory. After attending, students will submit within one week of the presentation a one-page+ paper reflecting on the discussion. This should *not* simply be a regurgitation of the content, but rather a personal contemplation of the experience. This write-up is counted in the Homework/Quizzes/Short Writing component of your grade.

The Writing Center @ Roanoke College, located on the Lower Level of Fintel Library, offers writing tutorials focused on written and oral communication for students working on writing assignments/projects in any field. Writers at all levels of competence may visit the Writing Center at any point in their process, from brainstorming to drafting to editing, to talk with trained peer tutors in informal, one-on-one sessions. The Writing Center is open Sunday through Thursday from 4 to 9 pm. Simply stop in, or schedule an appointment by going to www.roanoke.edu/writingcenter, where our schedule of writing workshops and creative writing playshops is also posted. Questions? Email writingcenter@roanoke.edu or call 375-4949. Like our Facebook page for updates!

Subject Tutoring is a CRLA Nationally Certified Program located on the lower-level of Fintel library in room 005. Subject Tutoring offers individual appointments in 30-minute intervals for Lab Sciences, Modern Languages, Math & CPSC, Social Sciences, and Business & Economics. Hours are Sunday - Thursday 4 p.m. - 9 p.m. For a list of tutorials or to make an appointment, go to www.roanoke.edu/tutoring.

The Office of Disability Support Services, located in the Goode-Pasfield Center for Learning and Teaching in Fintel Library, provides reasonable accommodations to students with identified disabilities. Reasonable accommodations are provided based on the diagnosed disability and the recommendations of the professional evaluator. In order to be considered for disability services, students must identify themselves to the Office of Disability Support Services. Students requesting accommodations are required to provide specific current documentation of their disabilities. Please contact Rick Robers, M.A., Coordinator of Disability Support Services, at 540-375-2247 or e-mail robers@roanoke.edu.

If you are on record with the College's Office of Disability Support Services as having academic or physical needs requiring accommodations, please schedule an appointment with Mr. Robers as soon as possible. You need to discuss your accommodations with him before they can be implemented. Also, please note that arrangements for extended time on exams, testing, and quizzes in a distraction-reduced environment must be made at least one week *before every exam*.

Course Schedule - This course expects you to spend at least 12 hours of work each week inside and outside of class.

Date		Chapter	Additional
Wed	Sept 2	0	
Fri		1	Self-Reflection – writing assignment due
Mon	Sept 7	2	
Wed		3	
Fri		book discussion	
Mon	Sept 14	4
