

CPSC120B

Fundamentals of Computer Science I Syllabus

Instructor: Dr. Durell Bouchard

Office Hours: MWF: 12400-1400, TTH: 1410-2410, also by appointment or open door

Office: Trexler 365-C

E-Mail: bouchard@roanoke.edu **Phone:**
375-4901

Course Objectives

This course is the first in a three course sequence designed to introduce students to the fundamental concepts of computer science including the underlying foundations from discrete mathematics. The course focuses on the design of algorithms to solve problems, the basics of mathematical logic, and the implementation of the algorithms in the programming language Python. Students will gain familiarity with the Linux operating system and the Emacs text editor as they develop programs.

Intended Learning Outcomes: At the end of the course the successful student will be able to

1. design, implement (in the Python programming language), and test algorithms to solve small to moderate size problems, appropriate for an introductory course. In particular, to implement the algorithms the student will be able to
 - use the basic control structures (conditionals and loops), data structures (lists and dictionaries), and modules provided by the Python language.
 - implement Python classes.
2. explain the fundamental concepts underlying objects, classes, and methods.
3. use the Linux command line interface for running Python programs and navigating the Linux file structure.
4. express integers in twos complement and vice versa and be able to perform and understand computer arithmetic.

5. prove logical equivalences and correctly use logical equivalences in writing Boolean expressions in programs.

Course Content

Prerequisites: There are no formal prerequisites for this course; however, a strong aptitude for math usually predicts success in the course. Prior experience with programming or with Linux is not necessary.

Text: *How to Think Like a Computer Scientist: Learning with Python: Interactive Edition 2.0*, by Bradley Miller and David Ranum, Runestone Interactive, 2015.

Lab: This course has a required one-hour lab after every class (MWF 2410PM – 3410PM). The purpose of the lab is to give the student a structured experience in software design, implementation, and testing, and to increase the student’s ability to use and understand the tools available for software development in the Linux environment. Associated with most labs will be post-lab assignments designed to reinforce lab concepts. Post-lab assignments are due before the beginning of class. Late lab post-lab assignments, will receive no credit.

Project: In addition to regular post-lab assignments, there will be a large programming project at the end of the semester. This project is designed to give students the opportunity to put into practice the problem solving and programming skills they have learned. As such it is one of the most important aspects of the course both for student learning and for assessment. You are encouraged to start on them immediately when assigned and get help from the instructor as needed.

Quizzes, Tests, and Exams: Short quizzes will be given to make sure you are understand the concepts and are keeping up with the course work. Quizzes will be at the beginning of class. No make-up quizzes will be given. Three tests and one comprehensive final exam will be given.

Test Dates:	Test #1	Friday, September 22
	Test #2	Friday, October 13
	Test #3	Friday, November 10
	Final Exam	Tuesday, December 12 (2400PM-5400PM)

Co-curricular: The Department of Mathematics, Computer Science, and Physics is offering a series of lectures designed to engage the campus community in discussions of ongoing research, novel applications, and other issues that face these disciplines. You are invited to attend all of the events but participating in at least two is mandatory. Within one week of attending an event you must submit a one page, single-spaced,

paper (to Inquire) reflecting on the discussion. If you do not turn the paper in within the one week time frame you may not count that event as one you attended.

Grading: Course grades are assigned based on the following weights and scale:

Grade Weights:	quizzes.....10%	project.....6%	tests.....54%
	post labs...10%	co-curricular...2%	final exam...18%

Grade Scale:	93-100 A	83-86 B	73-76 C	63-66	D
	90-92	A- 80-82 B-	70-72 C-	60-62	D-
	87-89	B+ 77-79 C+	67-69 D+	below 60F	

Course Policies

Attendance Policy: Class attendance is vital to your success in this course; material covered during missed sessions is the responsibility of the student. Conversations held in class illuminate the published class materials and are subject to evaluation on subsequent tests and quizzes. Moreover, quizzes and in-class assignments are not available for make-up.

Late Assignment Policy: Unless otherwise specified, assignments are to be turned in before the start of class on the due date. If you anticipate being unable to meet a deadline, talk to me at least 24 hours before the deadline. In extenuating circumstances we may be able to make special arrangements. Please note that this must be discussed – just sending an email does not automatically grant you extra time. Unexcused late work will receive no credit. Electronic “glitches” do not waive your responsibility to submit your work in a timely manner.

Make-up Policy: Everyone is expected to take tests, quizzes, and the exam at the scheduled time. Make-ups will be given only for legitimate, documented absences that the instructor has been notified of ahead of time. Make-up tests, if given, may be oral. There will be no make-up quizzes.

Academic Integrity: It is accepted that you have read and understood the standards for academic integrity at Roanoke College. All tests and exams are to be the work of the individual student. You are encouraged to get help from the instructor if you need help with any aspect of the course including programs and assignments. Student assistants, tutors, and classmates may help you understand course concepts but may not show you how to do any particular aspect of an assignment. Students may discuss lab work and help each other out but in all cases the work you turn in must be your own. Copying someone else’s work or turning in someone else’s work is NEVER allowed. Using someone else’s work or ideas as your own is plagiarism and an academic integrity offense. Examples of academic integrity violations include copying a program or part of a program (even one line) from someone else, writing code for someone else, telling someone else how to solve a problem or having someone tell you how to solve a problem. Discussion among students about

programming projects should be limited to general concepts, not specific aspects of how to complete the work.

Computer Use Policies: All students must abide by the Computer Use policies of Roanoke College. Failure to do so will result in involuntary withdrawal from the course.

Electronic Devices: All cell phones must be turned off prior to entering the classroom or lab. The use of any electronic device during a test or quiz is prohibited. This includes cell phones, personal media players, personal digital assistants, and laptops. Any use of such a device during a test or quiz will be considered a breach of academic integrity.

Disability Support Services: The Office of Disability Support Services (DSS), is located in the Goode-Pasfield Center for Learning and Teaching in Fintel Library. DSS provides reasonable accommodations to students with documented disabilities. To register for Disability Support Services, students must self-identify to the Office of Disability Support Services, complete the registration process, and provide current documentation of a disability along with recommendations from the qualified specialist. Please contact JoAnn Stephens-Forrest, MSW, Coordinator of Disability Support Services, at 540-375-2247 or e-mail her at: stephens@roanoke.edu to schedule an appointment. If you have registered with DSS in the past, and would like to receive academic accommodations for this semester, please contact Ms. Stephens-Forrest at your earliest convenience, to schedule an appointment.

Course Schedule

This course expects you to spend at least 12 hours of work each week inside and outside of class.

Week of	Topic	Test
Aug 30	Introduction to Computer Science, Linux, and Python	
Sep 4	Variables, Expressions, and Statements	
Sep 11	Loops	
Sep 18	Modules	Test 1
Sep 25	Functions	
Oct 2	Conditionals	

Oct 9	While Loops	Test 2
Oct 16		Fall Break
Oct 23	Strings	
Oct 30	Lists	
Nov 6	Aliasing	Test 3
Nov 13	Dictionaries	
Nov 22		Thanksgiving Break
Nov 27	Two-dimensional Lists	
Dec 4	Projects
