Course Objectives: *Continue to learn how to do mathematics!* Mathematics is a problem-solving discipline, and we are all constantly learning. The best way to learn is to focus on technique and not on memorization. My role as professor is to guide discussions and help you take the next step from wherever you are mathematically. One objective is for you to have a sound enough understanding of calculus that you can recognize it and apply it in future courses. This will not happen if you have just memorized your way through some problems. A broader objective is for you to be a good problem-solver, to help you excel at whatever entrance examinations and job situations are in your future. Finally, an objective is to enjoy the course. Calculus is the gateway to the awesome world of modern science. Let yourself be amazed!

Intended Learning Outcomes: At the end of the course, successful students will be able to
- Apply appropriate tests of convergence to a variety of infinite series
- Apply power series to solve problems in modern mathematics
- Recognize and interpret differential equations in basic applications
- Apply vector calculus techniques to compute quantities of interest
- Recognize the role of technology in calculus, understand when it should be used, and be aware of its limitations

Attendance Policy: This class meets **four** days per week. Regular attendance is expected. This means both physical and mental attendance; for most students, taking notes is a good way of making the best use of class time. You are responsible for everything done in class, through your attendance and sharing class notes with classmates. If you miss a class, e-mail me before class is over and explain why. **If you have two unexplained absences, you will be dropped from the course after being sent a warning notice.**

Calculus Lab: We will meet in Trexler 372 every Thursday from 8:30-10:00. This time will be spent working in groups on various problems, often interesting applications of the calculus we are studying. This time is informal and should be **noisy**. Ask questions of lab leaders and classmates! The labs are done in Mathematica, so having this installed (for free) on your laptop is important.
**(1) Be on time! (2) Bring laptop, pen, paper, textbook, notes. (3) Learn Mathematica!
(4) Think! (5) Work with others!**

Equipment: We will use Mathematica, a powerful mathematical software package, in class, in labs, and on tests. A personal copy for your personal computer is recommended, so that you can have it in class daily. Regular visits to your Inquire site (for all of your courses) is required. Assignments, extra materials, and grades will be posted regularly.

Academic Integrity: The college policy is fully supported. Tests are closed notes, closed book. You may always ask me for help on homework and labs. **Do not** copy homework or any portion of a lab report. No electronic devices other than calculators are allowed in a test situation.

I expect you to spend at least 12 hours of work each week inside and outside of class.

Homework: A problem set will be due each Friday (excluding week 1) that we do not have a test. These will be assigned on the previous Friday and each are worth a total of 25 points. There are two parts to each problem set. The first part is worth 10 points and will be graded based on effort and completeness. This part consists of the three daily homework assignments for the previous three class periods (assigned on Wednesday, Friday, and Monday). Daily homework will include roughly 5-10 questions and you are welcome to ask questions about them at the beginning of class. The second part of each problem set is worth 15 points and will be graded based on correctness and presentation. Each week you will complete 3 problems which will be carefully graded. Each of these problems is worth 5 points, with 4 points for correctness and 1 point for presentation. When you turn in your problem set on Friday, make sure the three problems graded for correctness are on top and then below are your three daily assignments. Your homework should be neat, organized, and stapled. No late homework will be accepted and solutions will be posted on the following Monday. For the first week we will have a single problem assigned below, due Friday, to get you accustomed to the grading; it will be worth 10 points. You can collaborate on problem sets but you must **write up your own solution**. If you are looking at another person's work or asking someone what to do next while writing up your problem set, then you are in violation of the academic integrity policy of Roanoke College.

Co-Curricular: During the course of the semester, you must attend at least two approved co-curricular events offered by the MCSP department. For each, write a two-paragraph description of the event, due within a week of the event. A sample is provided. Schedules for the talks can be found online at the MCSP department website and in Trexler hallways.
http://www.roanoke.edu/inside/a-z_index/math_cs_and_physics/conversation_series/spring_2018

Extra Credit: You may earn extra credit in several ways. My intent is to encourage you to have fun with mathematics, and that is the grading criterion that I will use – so have fun learning! You may check out from the Roanoke College library and report on "popular" mathematics books. You may report on mathematical web sites that have good calculus demonstrations or extra material. You may do one of the extra credit options posted on Inquire during the semester. The main rule is to do this now; waiting until the end of the semester will distract you away from the end-of-semester studying that you need to do.

Tests: There will be four tests and a final exam. Each test will cover all material discussed since the previous test. Anticipated test dates are (Th) 2/8, (Th) 3/1, (Th) 3/29 and (Th) 4/19. The exam is Wednesday, April 25, 8:30-11:30.

Make-ups: In case of sickness or scheduling conflicts, get in touch with me ASAP.

Grading: The lab reports count 20% of the final grade. Homework, co-curricular and class participation count 20%. Tests and the exam count 60% (12% each). Grades may be curved up based on extenuating circumstances.
A: 93-100 A-: 90-92
B+: 87-89 B : 83-86 B-: 80-82
C+: 77-79 C: 73-76 C-: 70-72
D+: 67-69 D: 63-67 D-: 60-62
F: 59 and below

MATH 122 DAILY SCHEDULE

1/15 Review
1/17 Sections 7.1,7.2 Differential Equations
      1/18 Lab 1
1/19 Section 5.5 Projectile Motion

1/22 Section 5.6 Applications of Integration
1/24 Section 5.7 Probability
      1/25 Lab 2
1/26 Section 8.1 Sequences

1/29 Section 8.2 Series, geometric series, k-th term test, harmonic series
1/31 Section 8.5 Ratio Test
      2/1 Lab 3
2/2 Section 8.5 Ratio Test

2/5 Section 8.6 Power Series
2/7 Review
      2/8 TEST #1
2/9 Section 8.6 Power Series

2/12 Section 8.7 Taylor Series
2/14 Section 8.7 Taylor Series
      2/16 Lab 4
2/16 Section 8.8 Applications

2/19 Section 8.9 Fourier Series
2/21 Sections 10.1, 10.2 Vectors
      2/22 Lab 5
2/23 Section 10.3 Dot Product

2/26 Section 10.4 Cross Product
2/28 Review
      3/1 TEST #2
3/2 What is Mathematics Day

SPRING BREAK

In the event of a MWF class being cancelled, the schedule will temporarily be moved back one class period (e.g., the section that would have been covered on Monday would be covered on Wednesday) and then a new schedule will be handed out to you later.

3/12 Section 10.5 Lines and Planes
3/14 Section 11.1 Vector-Valued Functions
      3/15 Lab 6
3/16 Section 11.2 Calculus of Vector-Valued Functions

3/19 Section 11.3 Motion in Space
3/21 Section 10.6 3-D Surfaces
      3/22 Lab 7
3/23 Section 10.6 3-D Surfaces

3/26 Section 11.6 Parametric Equations
3/28 Review
      3/29 TEST #3
3/30 No Class – Good Friday

4/2 Section 12.1 Functions of Several Variables
4/4 Section 12.3 Partial Derivatives
      4/5 Lab 8
4/6 Section 13.1 Double Integrals

4/9 Section 13.1 Double Integrals
4/11 Section 13.2 Area and Volume
      4/12 Lab 9
4/13 Section 9.4 Polar Coordinates

4/16 Section 13.3 Double Integrals in Polar Coordinates
4/18 Review
      4/19 TEST #4
4/20 Mathemagic

4/23 Review

Wednesday 4/25   FINAL EXAM 8:30-11:30

Turn In for Correctness Friday, January 19, beginning of class

Chapter 4 Review, problem 12

This will be graded on correctness, completeness, and presentation. It does not have to be typed (if you do, you can just email it to me) but please be neat and organized. If you make mistakes and need to cross out something, start over and turn in a neat copy.

This is worth 10 points, 8 for correctness and 2 for presentation. I do not need complete sentences but I do want to see all of the steps and see explanations when needed. For example, if you integrate by making a substitution $u = \sin(x)$, I would like to see that information written down in the appropriate place along with the follow-up $u' = \cos(x)$, and the resulting integral in u, du. If you integrate 2x to get x^2 you do not need to cite the Power Rule or show the 2's cancelling out. Showing all steps is part of "correctness" and copying the answer from Mathematica does not suffice except when that is the only way to get an answer (if you are not clear whether you need to show certain steps, ask!).

Papers turned in after the beginning of class will lose the presentation points, and papers will not be accepted after Friday midnight.

MATH 122 STUDY PROBLEMS

(Note: W2 refers to writing exercise #2, but #2 refers to "regular" exercise #2.)

Try as many of these problems as you can and ask questions about the ones you don't understand. Test questions will be modeled on these questions. You do not need to turn these in. Work on them with others, ask me questions, and understand the material!

Chapter 4 Review
Study: p374 #3-18,51-54

Sections 7.1,7.2 Differential Equations
Study: p506 W1,W2,#1-4,9-12,19-22,29-32,53-54;   p516 #3-10,21-24,51-52

Section 5.5 Projectile Motion
Study: p420 #3-12, 21-26

Section 5.6 Applications of Integration
Study: p433 #21-32

Section 5.7 Probability
Study: p441 #3-10,19-22,27-30

Section 8.1 Sequences
Study: p550 W1,#11-24,35-38,61-62

Section 8.2 Series, geometric series, harmonic series
Study: p559 W1,W2,#1-6,8-9,11-12,17-20,27-28,49,59

Section 8.5 Ratio Test
Study: p585 W1,W2,W3,#1-4,7-8,11-12,33-38,61

Section 8.5 Ratio Test
Study: p585 41-60 (as app), 5-6,15-16

Section 8.6 Power Series
Study: p593 W1,W3,#1-12,19-22 (radius)
