

Math 371: Topology

Dr. Hannah Robbins Trexler 270H, x4906, robbins@roanoke.edu (email is the best way to reach me)

Office Hours Monday, Wednesday, Friday 11:30 am – 12:30 pm, Thursday 11 am – noon, or by appointment.

Course Description This course is an introduction to topology, an area of mathematics that seeks to generalize some of the nice properties of the real numbers that make things like calculus possible and study other spaces with these properties. We will see many examples of topological spaces and maps between them as well as subspaces, product spaces and the notions of continuity and connectedness. Along the way we will hone our proof skills and our ability to develop an unfamiliar mathematical theory from its basic principles.

Learning Outcomes By the end of this course, successful students will be able to:

- Construct a valid proof that proceeds efficiently from hypotheses to conclusion
- Identify properties of sets and functions in the context of different topologies
- Identify homeomorphisms and be able to explain what it means for topological spaces to be homeomorphic
- Understand topological properties and use them to distinguish different topological spaces

Course Materials Worksheets (provided in class)

Important Dates

We will have a take-home final exam, which will be handed out on the last day of class. **The Final Exam will be due Monday 4/29 by 4 pm.**

Course Grades

The final course grade is determined in the following way:

Quizzes/MCSP Conversations	10%
Written Homework	55%
Proof Presentations	20%
Participation	5%
Final Exam	10%

A grade scale will be determined after final grades are computed, but will be no worse than the scale given below.

		B+	88-89	C+	78-79	D+	68-69		
A	92-100	B	82-87	C	72-77	D	62-67	F	0-59
A-	90-91	B-	80-81	C-	70-71	D-	60-61		

Quizzes

We will have a short weekly quiz where you will be asked to define two topology vocabulary words. These quizzes are to help you stay caught up on new vocabulary words, since it is impossible to understand what is happening in class or write good proofs if you are not clear on the definitions of the words being used. No make up quizzes will be given, but at the end of the semester I will drop your lowest quiz score.

MCSP Conversations The MCSP department offers a series of talks designed to appeal to a broad audience. Members of this class are encouraged to attend many of these meetings, however attending at least three talks is mandatory. Within one week of attendance you must submit your response to the talk. Each response will count as one quiz grade.

Written Homework There will be a short homework set due at the end of every worksheet. Homework is due at the beginning of class on the day we start the next worksheet. **No late homework will be accepted.** You may work with your classmates on the mathematics of these assignments, but you must write up your solution independently. (This means you should not look at anyone else's write-up or let anyone else see yours.) You may not work on homework with anyone besides me and your classmates.

Proof Presentations At the end of each worksheet we will have a day where selected students present proofs of statements from the worksheet. I will assign the proofs to be presented the first day of each worksheet. I will randomly select students from the class to present each of the proofs. You are each allowed one "pass" on a proof presentation. These presentations will be graded using the Proof Presentation Rubric (posted on Inquire).

Participation As we work through the course material, I expect you to come to class prepared and willing to contribute to our progress. There will be many ways to do this, including: working on worksheets during class time, supporting your peers during their proof presentations, joining class discussions, and asking good questions.

Attendance Policy Class attendance is expected. If you do have to miss class, you are responsible for learning all material covered that day. If you have not discussed your absence with me beforehand, you will be unable to make up any work missed.

Special Needs If you have a disability that may require an accommodation in this course, please provide me with your documentation within the first 2 weeks of the semester. I must have your documentation at least 48 hours prior to any accommodation made. (Check with the Center for Teaching and Learning for their scheduling guidelines.)

Academic Integrity I expect all of you to follow the Academic Integrity policies of Roanoke College. All graded work should be your own work! If you ever have questions about how these policies apply to our class please contact me. Any violations of these policies will automatically be turned over to the Academic Integrity Council.

Course Schedule The following schedule is **very approximate** and subject to change, but it should give you some idea of the timing of the topics covered. (Here "Wx" refers to "Worksheet x".)

Dates	Topic	Notes
1/14	Course Introduction	
1/16 - 1/23	W0: Set Theory	No Class Fri 1/18
1/25 - 2/4	W1: Topology, Open Sets	
2/6 - 2/15	W2: Closed Sets	
2/18 - 3/1	W3: Continuity	
Spring Break		
3/11 - 3/20	W4: Subspaces	
3/22 - 4/1	W5: Product Spaces	
4/3 - 4/15	W6: Homeomorphisms	No Class Fri 4/12
4/17 - 4/22	W7: Topological Properties	No Class Fri 4/19 Final Exam assigned Mon 4/22
Mon 4/29	Final Exam due at 4 pm
